Buoy Deployment Report

seaiceportal.de

Buoy information

Buoy name: 2025T143
IMEI: 300534063689460
Buoy type: Thermistor Buoy
Buoy owner: Norwegian Polar Institute

Deployment information

Date and Time (UTC): 12.07.2025 16:26
Position (Lat/Lon): 83.84888/24.06177
Region: Arctic Ocean
Contact:
Dmitry Divine (NPI)
Expedition name: Polarstern PS149-CONTRASTS 2025
Means of deployment:

Snow and ice conditions

Snow depth: 0.1 m
Ice thickness: 2.85 m
Ice freeboard: 0.85 m
Ice types:
FYI (First Year Ice)

Buoy-specific parameters

Chain length: 5 m
Sensor spacing: 0.02 m
Sensor ice water (Sensor ID): 165
Sensor snow ice (Sensor ID): 22
Sensor air snow (Sensor ID): 22

Additional information *(comments, weather, topography, ice floe size, etc.)*

SIMBA deployed in the minor ridge between two level FYI ice floes. Level ice thickness around 1.0-1.2 m. Close to the “main road” some 40 m away from ”MetCity”. The ridge is built from blocks of 15-20 cm thick. Sail height below 1 m. Ridge width about 2-3 m. The borehole for thermistor chain was drilled at the top of the ridge. Atmospheric conditions: wind >10 m/sec, air temperature about 0°C.
