Buoy Deployment Report

seaiceportal.de

Buoy information

Buoy name: 2025T145
IMEI: 300534063486580
Buoy type: Thermistor Buoy
Buoy owner: Norwegian Polar Institute

Deployment information

Date and Time (UTC): 21.07.2025 16:49
Position (Lat/Lon): 84.40153/-17.90291
Region: Arctic Ocean
Contact:
Dmitry Divine (NPI)
Expedition name: Polarstern PS149-CONTRASTS 2025
Means of deployment:

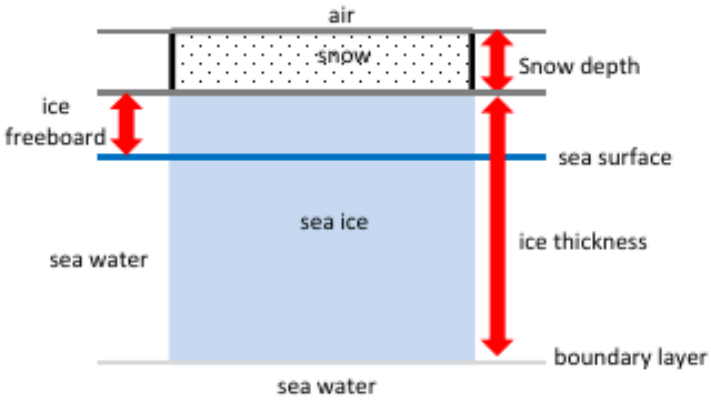
Snow and ice conditions

Snow depth: 0.12 m
Ice thickness: 3.23 m
Ice freeboard: 0.82 m
Ice types:
SYI (Second Year Ice)

Buoy-specific parameters

Chain length: 5 m
Sensor spacing: 0.02 m
Sensor ice water (Sensor ID): 166
Sensor snow ice (Sensor ID): 4
Sensor air snow (Sensor ID): 1

Photo credits: Dmitry Divine



Additional information *(comments, weather, topography, ice floe size, etc.)*

SIMBA deployed in the minor ridge between two level SYI ice floes. Level ice thickness on both sides of the ridge is around 1,8 m. Close to the "main road" and some 20 m away of the ROV hole. The ridge is built from blocks some 15 cm thick. Sail height about 0,5 m. Ridge sail width is about 7 m. The borehole for thermistor chain was drilled at the top of the ridge. The depth of the keel is about 4-4,5 m according to ROV multibeam survey from the day before deployment.
